ŠIBENIK

Among the Croatian towns, Šibenik stands out with its unique position in the central part of the Adriatic, in a picturesque and spacious bay on the sunken mouth of the river Krka.

The beautiful town of a unique urban expression is connected with the open sea by the vivid, narrow and curving St. Anthony's Channel. The entrance to the channel is protected by the Renaissance fortress of St. Nicholas, a symbol of the centuries-old unconquered history of Šibenik

CALL for Special Sessions

The IEEE MetroSea 2026 Organizing Committee invites proposals for Special Sessions on new or emerging topics in metrology for the sea that have the potential to have a major impact on the field in the near future.

Special sessions have the main aim of creating a mini-workshop on a specific topic, where researchers working on the same argument can make knowledge, familiarize, exchange ideas, create cooperation. They gather together researchers and students interested in a specific topic and can strongly contribute to the success of the conference itself. Moreover, they can be the first step for trainees and students to the organization of a scientific event.

Special Sessions are expected to be related to the conference theme or especially hot topics within the conference scope, provide a focused discussion of new and innovative topics. All submitted papers undergo the same review process.

SPECIAL SESSION PROPOSALS

Special Session proposals must contain the following information:

- Title of the proposed Special Session;
- Names, affiliations, and contact information of the session organizers;
- Brief biographies of the session organizers;
- Brief description of the proposed session with a list of the related topics.

Special Session Proposals must be submitted through the submission website at

www.metrosea.org/special-sessions

Visit the conference website as well as social pages for each specific call and additional news.
